

My name is Dr. Rama an Indian born agronomist residing at 166 Lawrence Road Salem, NH 03079 USA. I've been worked with Indian botanicals particularly converting oils onto eco-friendly pesticides for over 22 years. I'm not a professional ad writer. But, what I have to share with you is so important and so exciting - I just had to sit down and tell you all about it. So please bear with me a little.

Think about it. For the past four decades, using 1,000's of chemical based synthetic pesticides to control the plant pest and diseases is causing enormous damage to the environment. In turn it was reflected in terms of cancers and unidentified diseases in human and the animals.

Also few botanicals particularly neem oil, pungam oil (karanj oil), horticultural oil, cotton seed oil, sesame oil like products are being used in the market as pesticides either labeled for pesticides or unlabeled products. This is the era of organic. Particularly in Europe and USA organic food consciousness and environmental awareness is already started in a very big way. Education and research on botanicals is the most powerful way to learn to know about,

How to use botanicals? Where we have to buy the products?

World wide including the traditional farming countries like China, India is lack of enough scientific documentation on herbs usage as pesticides. But they have a traditional modal sketched out by "Rishis" or "Gurus" on herbs and botanicals usage in human, animal and plant health care. Our forefathers/ancestors are the researchers they formulated and identified the botanicals and its usage out of their experience. Imagine that neem oil has about 2500 years old.

Simply put, **experience is life's great teacher.**

**Gaining that care experience can be frustrating...** I am personally involved in botanical research since 1984 while my manurial trial on rice treated with neem leaves as an organic supplement. Since 1984 to till date I am in the research on botanicals.

At present there are many suppliers and traders trading botanicals with limited knowledge on botanicals. Unethical traders and manufacturers explore this market and they are primitive and not patient in continuing the botanicals and its formulations to fine tune the manufacturing as well product evaluations.

Needless to say, that's the present situation on botanicals usage in animal and plant health care program.

To overcome this problem my firm AgriNeem is taking care of quality manufacturing procedures and able to supply high quality botanicals particularly neem and pungam oil.

Another question is "**how to use**" information is now in the hands of technocrats of AgriNeem and its sister concern AgriInfoTech, Inc. AgriInfoTech is our technology partner tested our neem and pungam oil in Czech Republic, Ireland, USA, Spain and Brazil and found our product proven its excellence in plant and disease control.

**ACADEMIC EDUCATION of Dr. Ilangovan Ramasamy:**

- **Ph.D. Agronomy (Pesticide Chemistry)** (1991) GPA 4.0/4.0
- **M.S. Agronomy (Fertilizer Chemistry)** (1986) GPA 3.95/4.0
- **B.S. Agriculture (All basic agriculture subjects)** (1984) GPA 3.71/4.0
- **B.S. Zoology (Botany and Chemistry-Ancillary)** (1980) GPA 82%
